

THE RIGHT INSURANCE

Car Insurance Comparison Application

Document Type: Business Requirements Document

Solution: The Right Insurance

Platform: Microsoft Power Apps – Canvas App

Prepared By: Nikita Almeida

Version: 3.0

Status: Final

Summary

The client requires a centralized and user-friendly application that enables users to explore and compare car insurance plans offered by multiple insurance providers.

Business Problem

Currently, insurance information is distributed across different providers and plans, making it difficult for users to review multiple options and compare important plan information efficiently.

The absence of a centralized comparison experience can result in:

- Increased time required to evaluate insurance options.
- Difficulty comparing plans across different providers.
- Inconsistent presentation of insurance information.
- Manual switching between providers and plan information.
- Difficulty identifying differences in coverage, premiums, deductibles, and benefits.

The client therefore requires a simplified digital solution where relevant insurance information can be presented and compared consistently.

Objective

The primary objective is to develop an interactive car insurance comparison application using Microsoft Power Apps.

The solution should:

- Provide a centralized view of participating insurance providers.
- Display plans associated with the selected insurance company.
- Allow users to select multiple insurance plans for comparison.
- Prevent comparison until the minimum required number of plans has been selected.
- Provide detailed side-by-side access to selected plan information.

THE RIGHT INSURANCE

Car Insurance Comparison Application

- Allow users to clear their selections and start a new comparison.
- Provide simple navigation between application screens.
- Display the currently logged-in user's information.

Project Scope

In-Scope	Out-of-Scope
Four car insurance providers.	Purchasing insurance policies.
Multiple insurance plans for each provider.	Processing payments.
Insurance company selection.	Generating official insurance quotes.
Dynamic filtering of plans based on the selected company.	Customer registration.
Plan selection using checkboxes.	Policy renewals.
Selection of two or more plans for comparison.	Integration with live insurance-provider APIs.
Conditional enabling/disabling of the Compare button.	Real-time premium calculations.
Clear Selection functionality.	Customer document uploads.
Insurance comparison screen navigated through Compare button.	Broker communication.
Navigation between application screens using Compare and Back buttons.	Insurance recommendations.
Selected item highlighting on comparison screen.	
Display of the logged-in user's name.	
Excel-based insurance dataset integration.	

Stakeholders

Stakeholders	Responsibilities
Business Owner	Provides project direction and approves business requirements.
Product Owner	Defines priorities and validates application functionality.
Business Analyst	Gathers, analyzes, documents and validates requirement.
Power Apps Developer	Designs and develops the Canvas application..
Data Analyst	Prepares and validates insurance plan data.
QA/UAT Team	Tests functionality against requirements.
End User	Searches, selects and compares insurance plans.

THE RIGHT INSURANCE

Car Insurance Comparison Application

Functional Requirements

1. BR-01 – Insurance Provider Display

Requirement:

The application shall display insurance plans associated with the insurance provider selected by the user.

Expected Behavior:

When a user selects a company, the plan section shall dynamically update to display the relevant plans.

Priority: High

2. BR-02 – Dynamic Plan Display

Requirement:

The application shall display insurance plans associated with the insurance provider selected by the user.

Expected Behavior:

When a user selects a company, the plan section shall dynamically update to display the relevant plans.

Priority: High

3. BR-03 – Plan Selection

Requirement:

Users shall be able to select insurance plans they want to compare.

Expected Behavior:

A checkbox shall be provided for each available plan.

Priority: High

4. BR-04 – Minimum Comparison Requirement

Requirement:

Users must select at least two plans before initiating a comparison.

THE RIGHT INSURANCE

Car Insurance Comparison Application

Business Rule:

If the number of selected plans is less than two, the Compare button shall remain disabled.
When two or more plans are selected, the Compare button shall become enabled.

Priority: High

5. BR-05 – Clear Selection

Requirement:

The application shall allow users to clear previously selected insurance plans.

Expected Behavior:

Selecting Clear Selection shall remove the user's existing plan selections.

Priority: Medium

6. BR-06 – Compare Plans

Requirement:

The application shall provide a dedicated comparison screen containing the plans selected by the user.

Expected Behavior:

When the user selects two or more plans and click on Compare button, the application shall navigate to the comparison screen and display information for the selected plans.

Priority: High

7. BR-07 – Plan Details

Requirement:

The comparison screen shall display relevant information for each selected insurance plan.

Information may include:

- Benefits coverage details
- Ideal driver's profile
- Annual premium
- Deductible amount
- Liabilities
- Accident coverage amount

THE RIGHT INSURANCE

Car Insurance Comparison Application

- Eligible vehicle name

Priority: High

8. BR-08 – Comparison Navigation

Requirement:

Users shall be able to navigate through insurance plans selected for comparison.

Priority: Medium

BR-09 – Selected Plan Highlight

Requirement:

The application shall visually identify a plan selected by the user.

Expected Behavior:

The selected item shall be highlighted to provide visual feedback.

Priority: Medium

BR-10 – User Identification

Requirement:

The application shall display the name of the currently logged-in user.

Expected Behavior:

The application shall retrieve the user information from the authenticated Microsoft Power Apps session.

Priority: Low

BR-11 – Back Navigation

Requirement:

Users shall be able to return from the comparison screen to the main application screen.

THE RIGHT INSURANCE

Car Insurance Comparison Application

Expected Behavior:

A Back button shall be available on the comparison screen.

Priority: Medium

Acceptance Criteria

The solution will be considered functionally acceptable when:

- ✓ All configured insurance companies are displayed on the home screen.
- ✓ Selecting an insurance company displays the appropriate plans.
- ✓ Users can select insurance plans using the provided selection controls.
- ✓ The Compare button remains disabled when fewer than two plans are selected.
- ✓ The Compare button becomes enabled when two or more plans are selected.
- ✓ Selecting Compare navigates the user to the comparison screen.
- ✓ Only selected insurance plans are displayed on the comparison screen.
- ✓ Users can navigate through selected plans.
- ✓ A selected comparison item can be visually highlighted.
- ✓ Clear Selection removes the user's current selections.
- ✓ The application displays the logged-in user's name.
- ✓ The Back button returns the user to the main screen.

Assumptions

- ☒ Insurance plan data provided in the Excel dataset is assumed to be accurate for demonstration purposes.
- ☒ Users accessing the Canvas application will have the required Microsoft Power Platform permission.
- ☒ The current solution is a prototype/portfolio implementation rather than a production insurance platform.
- ☒ No financial transactions will be processed through the application.
- ☒ Insurance information will not be retrieved directly from provider systems in the initial release.

Success Criteria

- The project will be considered successful when users can:
- Select Provider → Explore Plans → Select Multiple Plans → Compare Plans → Review Details → Return/Modify Selection
- The solution should reduce the manual effort required to review insurance options while demonstrating how Microsoft Power Platform can be used to create an interactive insurance comparison experience.
